

# Unearth our range of high-barrier compostable packaging

Look no further than Parkside's **Park2Nature™** compostable laminates for cradle-to-cradle packaging made from renewable natural materials that safely return to nature after use.

Made from PEFC-accredited plant-based resources, including paper, eucalyptus fibre, cassava, and corn starch, Park2Nature™ laminates reduce reliance on petrochemical resources. The entire range is fully tested and accredited to EN13432 and TÜV standards, providing independent assurance that the laminates will compost in less than 12 weeks at 60°C for industrial composting and 26 weeks in ambient conditions for home composting; turning back into water, carbon dioxide and biomass, and leaving no adverse environmental effects.

Park2Nature compostable laminates replace mixed plastic laminates that cannot be, or are not, recycled, with a high-barrier compostable alternative. In addition, Park2Nature is approved for direct food contact, is GMO\* and PLA Free\*, and thanks to our manufacturing capability in the UK and Malaysia, carbon miles can be minimised for a lower carbon footprint.

**Park2Nature™ compostable laminates** are ideally suited to a broad range of product applications and markets, particularly smaller pieces of packaging with residual food contamination, including:

Ambient foods

Frozen foods

Hot beverages

Bakery & Confectionery

Snacking

Deli products

Pet food

Fresh protein & plant-based alternatives

Home

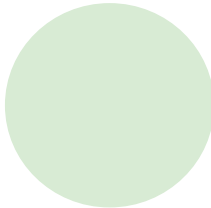

Cooked meats

Fresh produce

Health & beauty

Get in touch to learn more about our latest compostable innovations!

Available in a wide variety of formats including lidding film, which when used in conjunction with a pulp tray offers a fully compostable complete solution, as well as pouches, quad bags and reels suitable for flow wrap and sachets alongside printer laminate.

\*Does not contain (PLA) Polylactic Acid bioplastic materials and are GMO-Free, meaning they do not contain any intentionally added genetically modified organisms (GMO)
