

Say hello to the innovative Parkside mono-polymer laminates!

High performance and designed for ultimate recyclability, our latest material innovation is a powerful new tool in packaging-led brand sustainability.

Manufactured exclusively from Polypropylene (PP) substrates, the new laminates replace non-recyclable aluminium foil and PET mixed polymer laminates and can be utilised in a wide range of packaging formats, including:

Flow wraps

Pouches

Quad seal bags

Sachets

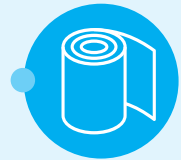

Stick packs

Flat bottomed bags

Pillow packs

Printer laminate

Launched in both duplex (OPP/CPP) and triplex (OPP/MOPP/CPP) configurations, these laminates can be tailored for use, delivering standard barrier all the way to ultra-high barrier applications. The ultra low seal temperature cast PP (CPP) seal layer is available in different thicknesses depending upon your pack format and conversion requirements:

Duplex laminate 50mu and above

Example, OPP / CPP
(reverse printable with
clear or white seal layer)

Triplex laminate, from 30mu up to 100mu

Example, OPP/MOPP/CPP
(reverse printable)

The new films possess superior gas, mineral oil, water, light and UV barrier performance to extend product shelf-life performance and reduce food waste, as well as being ideal for a wide range of food applications, including coffee, soup and confectionery.

They can also be used in the packaging of products that require more rigorous barrier performance, such as condiments, toiletries, perfumes, medicines and alcohol, subject to suitability testing.
