

# Uncover our range of sustainable lidding solutions!

Whether compostable, renewable, or recyclable, Parkside's lidding solutions are designed for ultimate product protection and minimal environmental impact, providing the ideal complement to any sustainable packaging agenda.

Comprised of renewable and certified compostable films, renewable and recyclable papers, recyclable PET monomers, or minimum 30% PCR content films, Parkside's lidding range simply performs!

Packaging designs can be enhanced with barriers to gases and moisture, lightweight structures, macro punching, micro perforation and laser scoring for easy-open, reseal, and portion control functionality.

Paired with complementary trays, the Parkside lidding range creates completely sustainable packaging solutions. Transparent and certified compostable films combined with pulp trays deliver a complete compostable solution, and PET monomer lidding, when heat welded and combined with PET trays, can be fully recycled in today's recycling infrastructure.
